# Introduction

Efficient energy savings  
LED lighting solutions  
for you

- Since its inception in 1982, Nardeen Lighting has built a strong market leadership Position in the Lighting market in Kingdom
- Introducing LED lighting solutions from Nardeen Lighting Company Efficient, sustainable energy saving lighting solutions that not only reduces electricity bills, but also delivers longer service without impact of maintenance and replacement labor and costs.
- We hold ISO certifications for maintaining our factory at unsurpassed levels of Professionalism
- Our Lighting solutions bring together the finest designs, materials and technology available and at our local industrial facilities, we fabricate, paint, assemble and market world class highest quality products.
- Please select wider range of choices that we are happy to fulfill through our exclusive sources and LED products.

# LED technology

## LED

An LED (light-emitting diode) is a semi-conductor device or chip that produces light when an electrical current is applied.

### Remember:

LEDs are just one of many components – optics, housing, power sources, to name a few – used to create an LED fixture or lamp. When looking at claims about lifetime, efficiency, and design, it is important to compare the specifications of the entire LED system as a whole, not just the specifications of the individual system components.

## Efficiency and efficacy

The “efficacy” of a lighting fixture is usually expressed as the amount of light (in lumens) produced by a certain amount of electricity (in watts). Lighting fixture “efficiency” is the ratio of the total lumens exiting the fixture to the total lumens produced by the light source. Efficiency is also used to discuss the broader concept of using resources efficiently.

### Remember:

It is important to note that the efficacy of the LEDs themselves is always greater than the efficacy of the LED fixture. This is caused by many factors including losses as light bounces off reflectors and passes through lenses. Make sure when specifying a light fixture that you are looking at the appropriate fixture data versus the LED source data.

## Lifetime

For traditional lighting sources, lifetime is reported as “mean time to failure,” which means the average time it takes for some percentage of lamps (usually 50%) to fail completely. With an LED source, light output diminishes gradually. So for LED sources, lifetime translates to how long a lighting fixture retains a certain percentage of its initial light output, which is also called lumen maintenance.

### Remember:

The lifetimes of LED sources and traditional light sources are defined differently. For white LEDs, lifetime is referred to as the time after which 70% of the original light output remains, not when the source has completely burnt out.

### Directionality

LEDs are directional sources. Traditional light sources (e.g., the incandescent bulb) emit light in all directions. In order to collect light and direct it onto the surface you are trying to illuminate, you must use lenses and reflectors, which absorb light and reduce the total output of the fixture.

#### Remember:

As an LED source is already emitting the majority of light in a defined direction, it requires significantly less beam shaping optics, leading to a more efficient light fixture. A traditional source may produce more lumens than an LED source, but it may lose much of its light when passing through the required optics. It is important to consider total illuminance, measured in foot candles or lux, when making comparisons between light fixtures.

### Correlated Color Temperature (CCT)

Correlated color temperature indicates the relative color appearance of a white light source, from yellowish-white or “warm” (2700-3000K) to bluish-white or “cool” (5000K+).

#### Remember:

Certain light sources are associated with particular color temperatures. LED fixtures come in a variety of fixed color temperatures, making them easy to replace or combine with current light sources. Some LED fixtures also provide a range of color temperatures within a single fixture.

### Color Rendering Index (CRI)

Color Rendering Index (CRI) is a measure of the ability of a light source to render colors, compared to a reference source (incandescent or daylight), on a scale of up to 100, with 100 being identical to the reference source.

#### Remember:

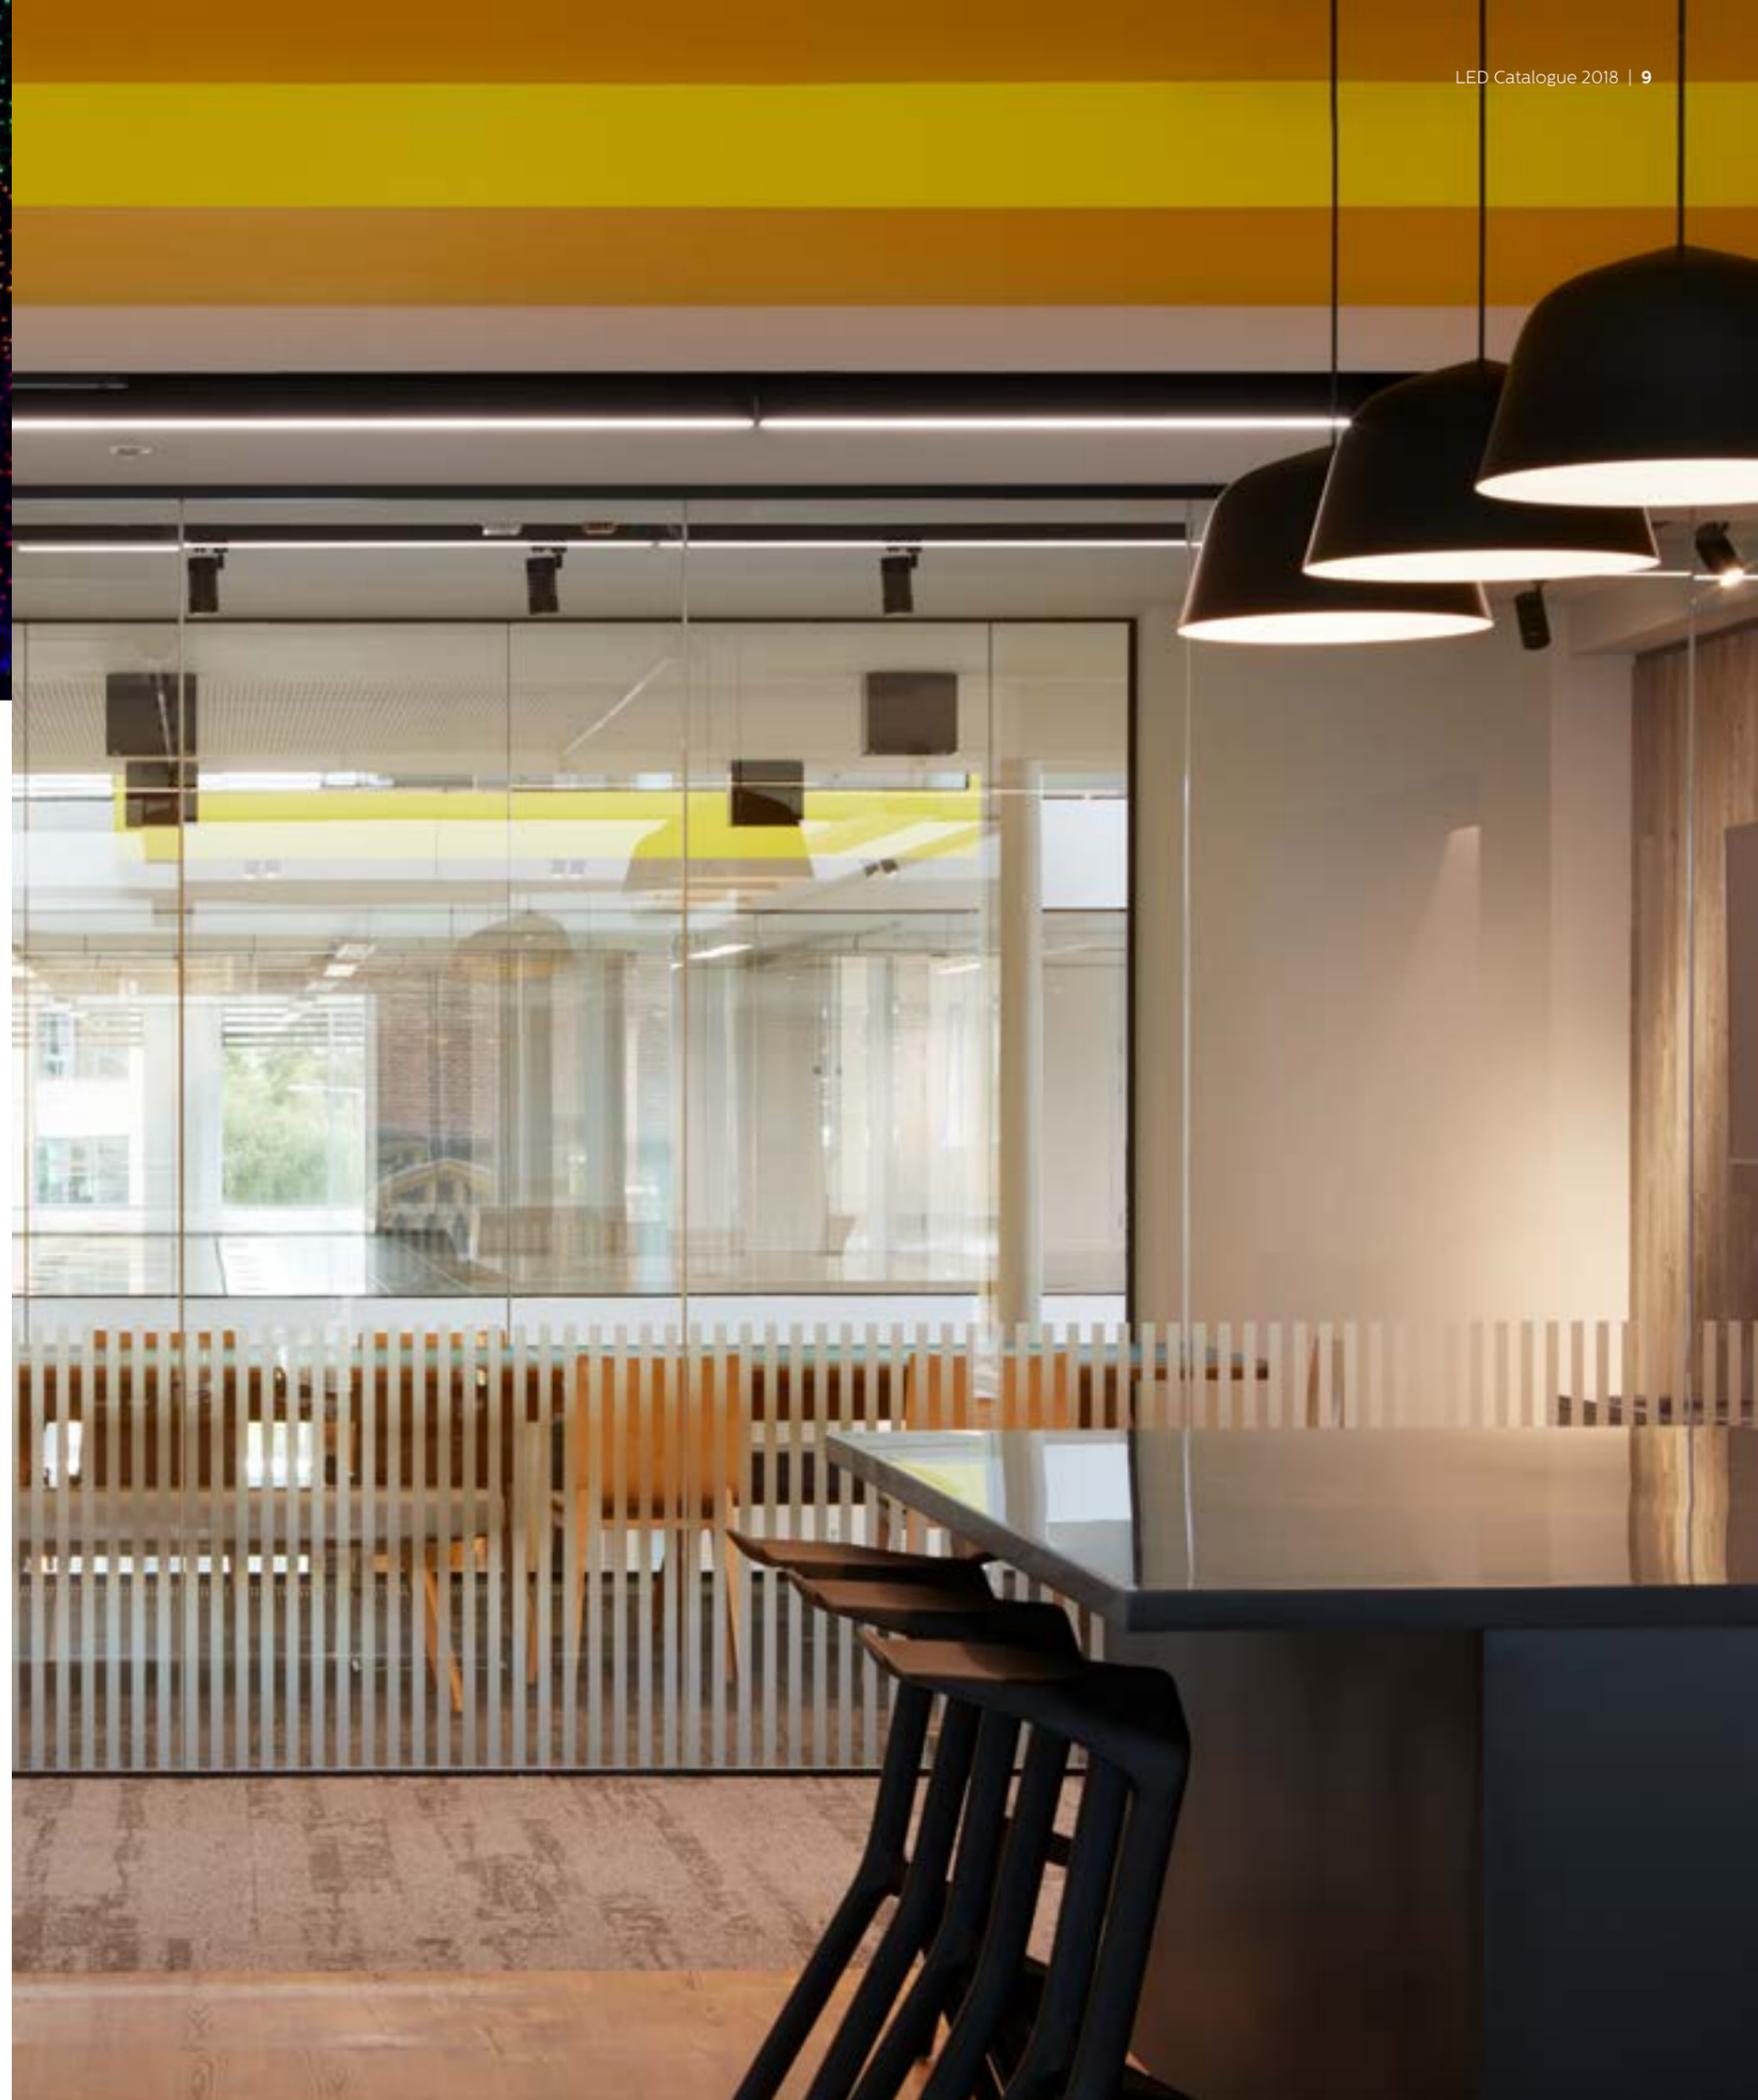

The higher the CRI, the better the fixture’s ability to show true colors.

### Sustainability

LED lighting is often linked to sustainability in the context of energy. But sustainability is a much larger concept, with energy efficiency being just one component. Sustainability takes into account environmental responsibility, including waste reduction, recyclability, materials and resources, and building and design practices themselves.

#### Remember:

LED lighting supports sustainable design in several ways: it can reduce energy consumption, it requires infrequent replacement (leading to less waste), and it contains no hazardous mercury. Some LED fixtures are designed to be disassembled more easily for recycling.

# Office lighting

## LED Panel Office

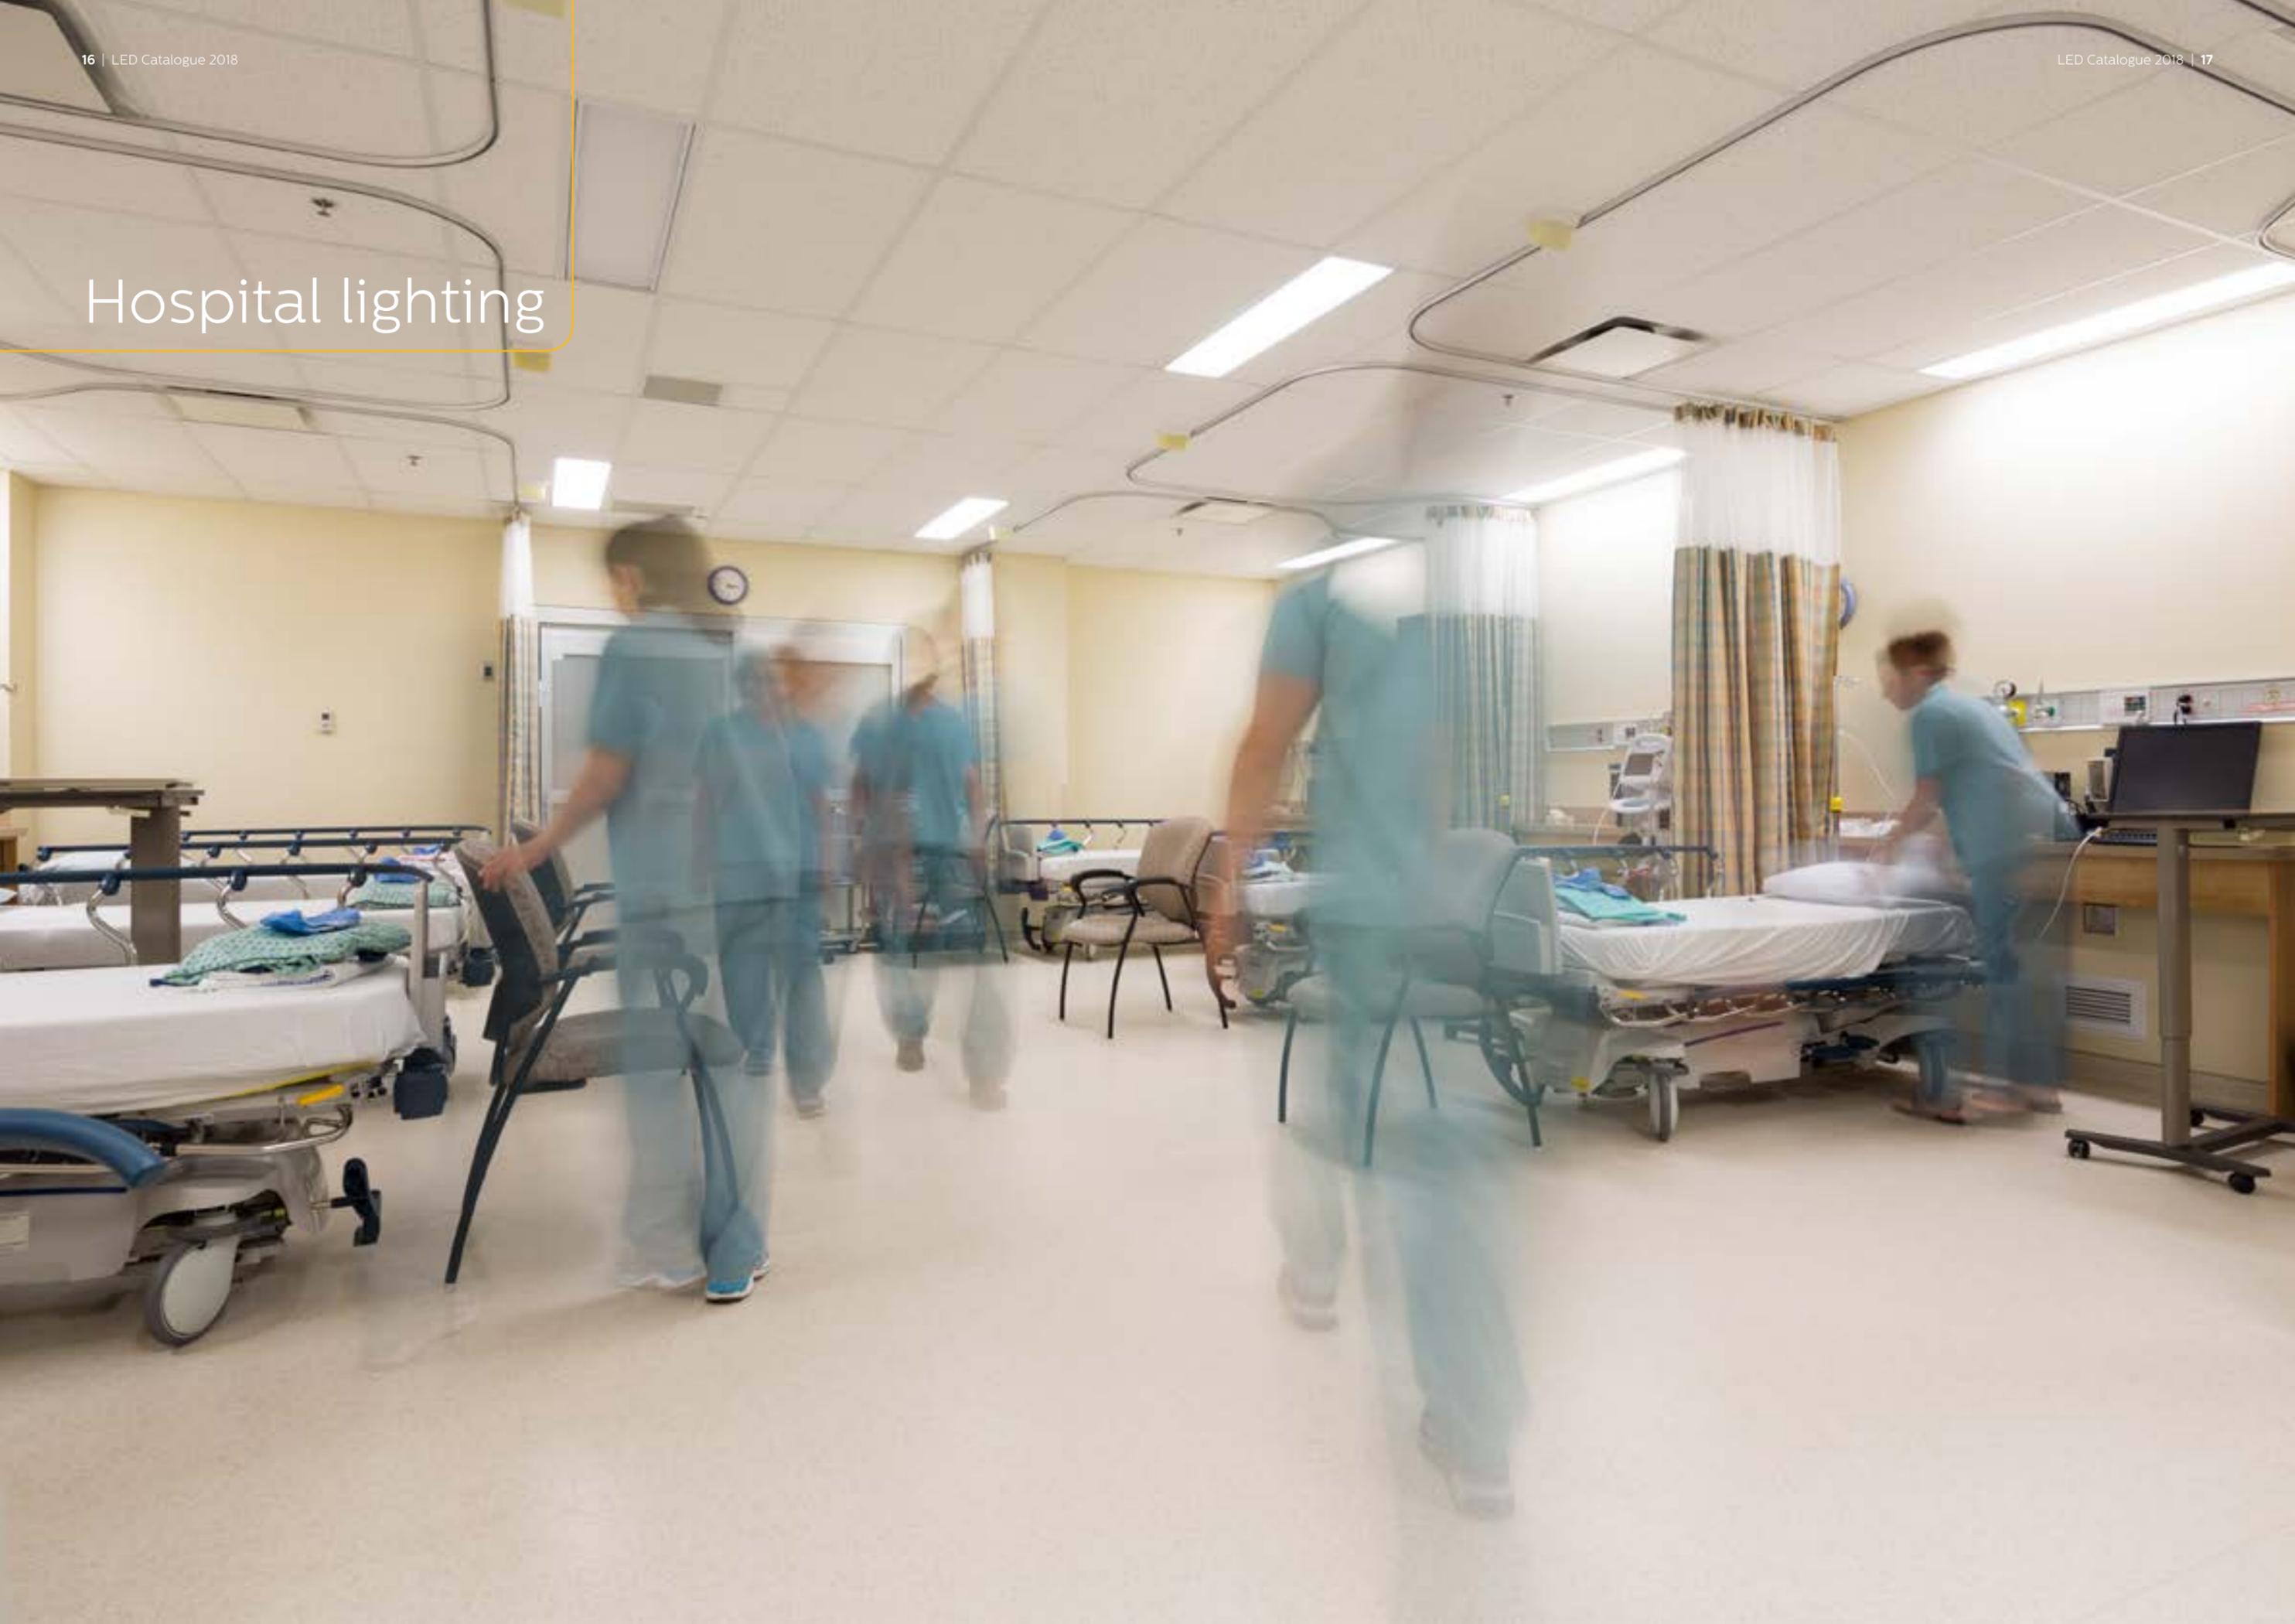

- Offering LED lighting solutions for offices focusing employee's wellbeing and health
- LED panel recessed and surfaced from Nardeen helps balance functionality and inspiration at work to the employee who is engaged in practical tasks.
- Emergency lighting facility in case of power failure.
- Low impact lighting that makes employees feel better and continuously inspire them to become more productive backed up with proper system design, commissioning and attention to the comfort of users.
- LED technology gives the possibly to transform work spaces.
- Reduce your office energy bills by using energy efficient Nardeen LED downlights in your office

## LED Downlight Office

- Nardeen recessed down in modular downlight comes in different sizes as per your office lighting requirement.
- Energy efficient luminaire ideal for retrofitting existing conventional luminaire.
- To develop the wellbeing at office and enhancing brand identity, we offer you low impact lighting that makes employees feel better and continuously inspire them to become more productive.
- Compatibility with proper system design, commissioning and attention to the comfort of users.
- In world of financial pressure and increased environmentally concern as well as regulation, it is essential to address what is one of the major contributors to your energy bill by using Nardeen LED downlights in your office.

# Hospital lighting

## Bed Head Unit Luminaire

### Hospital

- At Nardeen lighting we help our today's consumers of healthcare to remain well informed and expect better choices.
- We make hospitals to be welcoming and efficient places to go for treatment by supplying range of Bedhead units
- Be it a horizontal type integrating a variety of functions such as those for doctors and nurses to make diagnosis and medical treatment.
- Healthcare lighting we offer is customized at care and high levels of services.
- With electrical functions as well as configuration for medical gases on the lower one.
- Power supply sockets, telephone outlets data and communication terminals can be applied.

## LED Cleanroom Luminaire

### Cleanroom

- We offer LED cleanroom accurate color rendering in the lighting is of vital importance and excellent vision beyond florescent lighting solution.
- Ideal for hospitals, laboratories, and certain production environments, e.g. in the food industry, graphical and clothing industry.
- Special IP65, easy-to clean, dust free luminaires that meet all applicable lighting requirements and norms. With the
- Extremely low operational cost over the total lifetime of the luminaire
- Excellent financial return on investment.
- The luminaire's high color rendering properties ensure the top-class optical performance required
- Energy efficiency and extremely low operational cost over total lifetime offering excellent quality of light with high color rendering required for examination and clean visibility.

# Hospitality lighting

## LED Spot Restaurants

- We offer right ambience to cater for your hotels and Restaurants, a place for people to meet, socialize and simply enjoy their experience.
- Energy efficient luminaire to serve your guests some light refreshment.
- Versatile lighting that can create enjoyable hotel and restaurant ambience, from homely evening mood to lively lunchtime luminosity. It can also accent special features like paintings and bottles.
- Adjustable pendant and surface mounted luminaire creating perfect lighting optimized LED controls will create perfect light scene
- With Nardeen retail lighting solutions make your venue with unique experiences, lasting memories and warm welcome.

## LED Pendant Luminaire Hotels

- Energy efficient attractive LED pendant luminaire focusing on personalizing fuest experience
- Innovative lighting solutions from Nardeen lighting will create a warm welcome and unique ambience to make your hotel more attractive.
- Easy to read menus and see drinks behind the reception desk.
- Focal points such as buffets need highlighting to attract guests and good color rendering is essential wherever you serve food, helping to tempt guests and make everything look far more appetizing..

# Residential living lighting

## LED Chandelier Residential

- Our Residential applications products deliver exceptional light quality, consistent and balanced light source
- Energy efficient luminaire Ideal for kitchens, hallways, bathrooms, closets, laundry, porches and garage work rooms;
- A chandelier can uplift the style and dynamics of any room.
- Decorative insight and simply look fabulous
- We are delighted to cater your needs when it comes to light your residence brilliantly with our lighting solutions.

## LED Downlight Residential

- Energy efficient recessed LED luminaire for residential application
- Wide range of varieties in terms of colors, sizes and IP specification and cut outs each category provides a different purpose.
- Living /dining rooms are place to cheer with families and Bedrooms are a place to hideaway to relax watch television or simple read a book.
- We can also assist you in planning the right light for a home with different luminaires with different light output, temperature and power consumption
- It requires well planned and selected lighting that creates perfect function and right ambience for living, comfort, relaxation and wellbeing.

# Retail lighting

## LED Modular Downlight

### Shops and Displays

- Invite your customers in shop with the Nardeen retail lighting products creating a compelling brand identity to engage and inspire shoppers
- Energy efficient retail downlights with excellent focus on distribution of lighting, attracting customers.
- Retail lighting and visual merchandising means providing flexibility to meet the specific needs of the user that also include details on the merchandise to buy.
- Recessed mounted flexible and cost effective modular downlights with adjustable beam angle lighting solutions that can bring your store to life.

## LED projector

### Shops and Displays

- Energy efficient track mounted recessed and surface mounted LED projectors for today's shoppers aspiration and unique store experience
- Proper vital lighting creating this aspirational, motivating setting.
- Ideal for sparkle in storefront displays to the engaging ambiance of the interior, effective scene lighting draws shoppers in, keeps them there longer—and brings them back again.
- New choices in lamps, ballasts, LEDs, and fixtures elevate your visibility and brand
- Nardeen retail lighting solution reduces maintenance. We offer retail lighting products uniquely suited to enhancing the retail environment and boost your sales by excellent lighting projection on your merchandise.

# Urban lighting

## Floodlight

### Flood and Area

- Energy efficient flood lighting from Nardeen illuminate the outdoors Limit uplight and glare in parking lots and roadways with our selection of Area Lights.
- To direct light to a specific space, like features of a building or a sign, view our selection of Floodlights.
- Both options will provide enough light output to properly illuminate the application area, in the perfect color temperature.
- Our LED fixtures save energy, allow for less light pollution and provide a lower total cost of ownership. Consider the following when choosing between Area and Floodlights:
  - Application use
  - Beam spread and light distribution
  - Design style
- We offer a wide variety of Flood and Area Lights

## Street Light

### Road and Street

- Energy efficient safer roads LED street lighting from Nardeen
- Essential to support economic activity and people's movements.
- Our offer of innovative street light LED luminaires can help address your environmental concerns and the increasing cost pressures on your municipal budget.
- Practical and beautiful, efficient and sustainable, they balance impressive energy savings with the high quality light
- Enhancing driving conditions and life in the city during night.

Suspended Panel /30x120/IP20

220-240V  
50-60Hz

IP  
20

## Specifications

* Light Source	LED	* Voltage & Frequency	220-240V/50-60Hz (FOD/DALI) 110-277V/50-60Hz (FOD)
* Power	40W	* Dimming	DALI (220-240V) only
* Luminous Flux	4000lm	* Material	Aluminum housing
* Color Rendering Index	>80	* Emergency	Yes
* Correlated Color Temperature	Warm white: 3000K Neutral white: 4000K Cool white: 6000K	* Color	White
* Drive Current	1.05A	* Optic	Opal diffuser cover
* Operating Temperature Range	- For 220-240V/120-277V FOD: -20...+45°C - For 220-240V DALI: -20...+45°C	* Connection	With pull relief
* Lifetime	50,000 Hrs	* Installation	Cable suspension
* Ambient Temperature	25°C		

## Benefit

Ideal for switching over to LED

General Indoor Lighting

### Specifications

* Light Source	LED	* Voltage & Frequency	220-240V/50-60Hz (FOD)
* Power	60W, 120W, 180W, 240W	* Material	Aluminum Alloy
* Luminous Flux	6600lm, 13200lm, 19800lm, 26400lm	* Color	Grey
* Color Rendering Index	70	* Optic	Light distribution angle 60°
* Correlated Color Temperature	Neutral white: 4000K Cool daylight: 6000K	* Connection	Pre-wired power cable and assembly of input connector for easy and safe installation
* Drive Current	1.05A	* Installation	U-shaped bracket; Universal installation; Aiming angle scale
* Operating Temperature Range	-40° to +50°C	* Ambient Temperature	35°C
* Lifetime	50,000 Hrs		

**Benefit**  
Ideal for switching over to LED

Road and Street

Parking Lot

# SL700

## LED Street Light

Specifications			
* Light Source	LED	* Voltage & Frequency	110 – 277V/50-60Hz
* Power	40W, 80W, 120W, 160W, 200W, 240W, 280W	* Dimming	No
* Luminous Flux	4800lm, 5000lm, 9600lm, 10000lm, 14400lm, 15000lm, 19200lm, 20000lm, 24000lm, 25000lm, 28800lm, 30000lm, 33600lm, 35000lm	* Material	Housing: Die cast aluminum
* Color Rendering Index	>70	* Emergency	No
* Correlated Color Temperature	Neutral white: 4000K Cool white: 5700K	* Color	Body: Grey
* Drive Current	0.7 A	* Optic	Iso-Brightness
* Driver		* Connection	Direct male-female connection
* Operating Temperature Range	-40 – 50°C	* Installation	Post side; pole diameter 42-60mm
* Lifetime	50,000 Hrs	* Ambient Temperature	

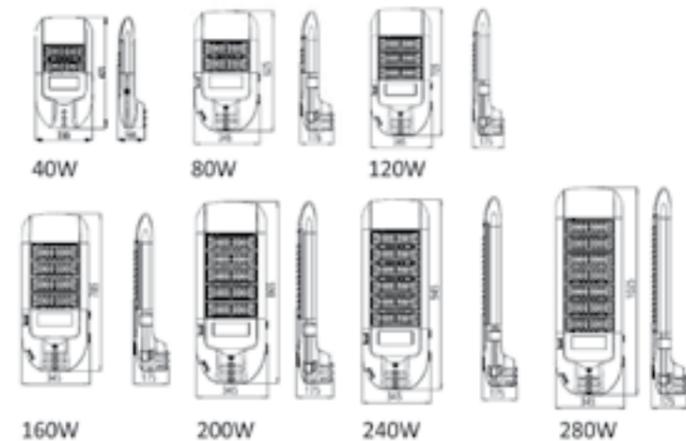

**Benefit**  
Ideal for switching over to LED

# SP300 LED Step light

Recessed soft LED wall flood lights

## Specifications

* Light Source	LED	* Voltage & Frequency	110V / 230V
* Power	12W	* Dimming	No
* Luminous Flux	450lm 350lm	* Emergency	No
* Color Rendering Index	80	* Color	Body: Grey
* Correlated Color Temperature	Warm white: 3000K	* Optic	Diffuse lens (450lm) Angled louvers (350lm)
* Drive Current	20mA	* Installation	Wall mount
* Lifetime	50,000 Hrs		

**Benefit**  
Ideal for switching over to LED

General Indoor Lighting -  
Outdoor circulations

## General Information

## Wall/Surface ceiling Mounted LED Down Light

220-240V  
50-60Hz

IP  
65

### Specifications

* Light Source	Replaceable LED Module	* Voltage & Frequency	220-240V/50-60Hz
* Power	4.5W	* Dimming	Trailing edge
* Luminous Flux	2700K: 180lm/ 2x180lm	* Material	- Housing: Aluminum - Diffuser: Glass
* Color Rendering Index	80	* Emergency	No
* Correlated Color Temperature	Warm White: 2700K	* Color	Body: Black, Matte White, Graphite
* Lifetime	40,000 Hrs	* Optic	Narrow beam
* Beam Angle	36°	* Connection	3-Pole terminal block
* Installation	Surface Ceiling/Wall Mount		

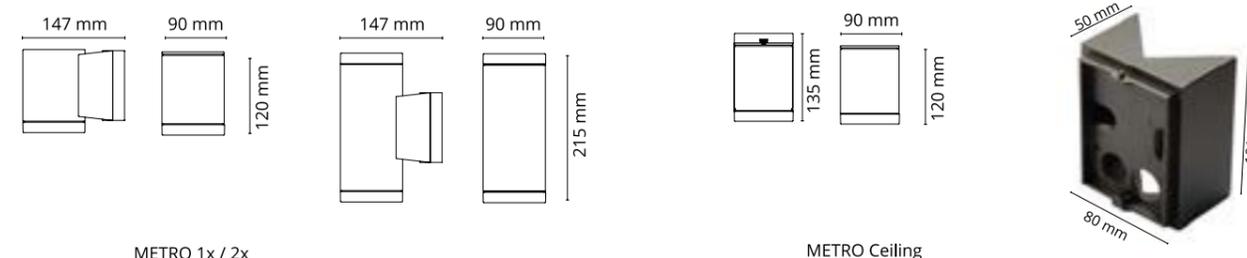

### Benefit

Ideal for switching over to LED

General Information

## Common LED **myths**

Notwithstanding the numerous benefits linked to LED lighting, misconceptions and inaccuracies on its nature and advantages still abound. The following list dispels the myths surrounding LED lighting and provides a clearer explanation about how the technology really works and how it can work for you.

# FACTS

### Myth 1 LEDs last forever

LEDs have a long source life, but like all light sources, they slowly fade over time. This light output degradation, also known as lumen maintenance (or lumen depreciation), is predicted by testing LEDs over a long period of time in order to determine when a specified percentage of light output is lost. Ambient temperatures, electrical drive currents, and the effectiveness of cooling systems are all factors that contribute to lumen depreciation. While LEDs typically do not catastrophically fail, lumen maintenance is a critical factor in determining useful lifetimes.

### Myth 2 LEDs are not bright enough

LED traffic lights are already common and are certainly a sign that LEDs are bright enough to be seen even in daylight. Outdoor roads, tunnels, entire building façades and indoor offices, and shop floors are being lit entirely with LEDs today. By any measure, illuminance or luminance, LEDs have enough light output for use even in very large outdoor daylight-visible installations.

### Myth 3 White LEDs produce over 180 lumens per watt

Many manufacturers test their LED chips on lab benches at room temperature conditions with short "pulse" tests that produce a high lumen output that is not directly comparable with practical use. While these results are not necessarily "wrong," they do not reflect the typical expected output of LEDs once they are integrated into lighting fixtures. Although percentages vary, it is not uncommon to see losses of 30 to 40%.

### Myth 4 3 Watt LEDs are brighter than 1 Watt LEDs

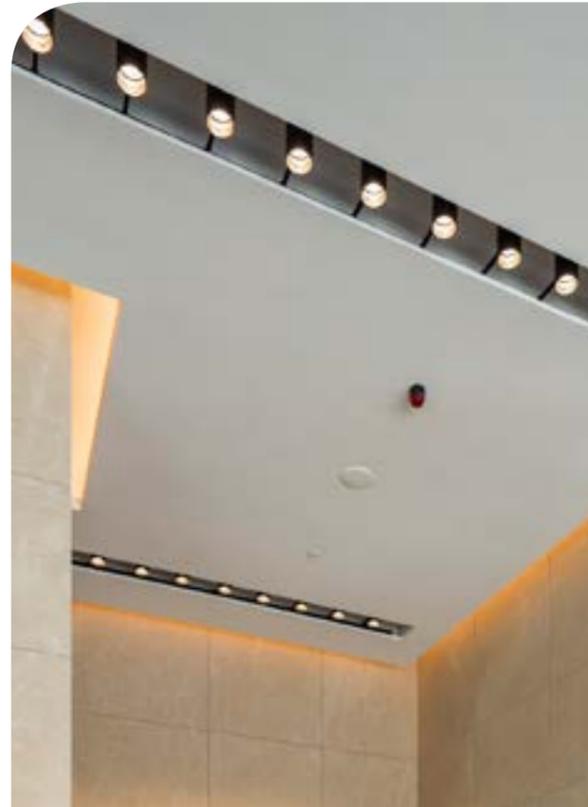

People are used to looking at wattage to determine the output of a light source. However, the wattage of an LED is not directly comparable to either the wattage of a traditional light source or even from one LED to another. Therefore, light output and light extraction efficacy, rather than raw wattage, are the key factors when looking at an LED source.

Efficacy is the amount of light in lumens to the power used in watts or lumens per watt. Simply reporting the number of watts does not reflect efficacy; two different LEDs can consume the same power but differ noticeably in light output. Thus, when selecting LEDs or LED fixtures, it is more about light output, than power.

### Myth 5 LEDs generate no heat

When used in lighting applications, LEDs do not radiate infrared heat, only visible light. However, waste heat is produced during the conversion of electricity into light and, if not properly removed

from the lighting system, may potentially damage the LEDs. The heat removal can be accomplished through carefully engineered heat sinks that are built taking these thermal issues into account. The larger the heat sink, the more efficiently and effectively heat is drawn away from the LED and dissipated into the surrounding air.

### Myth 6 LED systems cost too much

The initial investment of LED systems is higher than that of conventional systems, but the return on investment (ROI) for the use of LED lighting systems in an installation is surprisingly rapid when taking maintenance and energy cost savings into consideration. Due to the long life of the LED, no lamp replacement is required. With energy savings ranging from 50% to 70% compared to conventional light sources, economic payback can be seen in less than two years. Additionally, the upfront cost of LED systems is also continuing to drop rapidly.

### Myth 7 LED light quality is poor

There are several measures used to describe light. Color temperature characterizes the color appearance of a source and describes the apparent warmth or coolness of that light source. The Color Rendering Index (CRI) is a metric used to measure the quality of light. The CRI for many white light LED systems is typically between 70 to 85 (out of 100), and continues to improve rapidly, making it suitable for nearly all lighting applications. CRI is currently the prevalent method for judging light quality.

### Myth 8 LEDs are not resistant to vibration

There are no moving parts, filaments or fragile glass enclosures required with LED lighting. LEDs are therefore very suitable for use in road and bridge applications.

### Myth 9 LEDs have problems switching rapidly

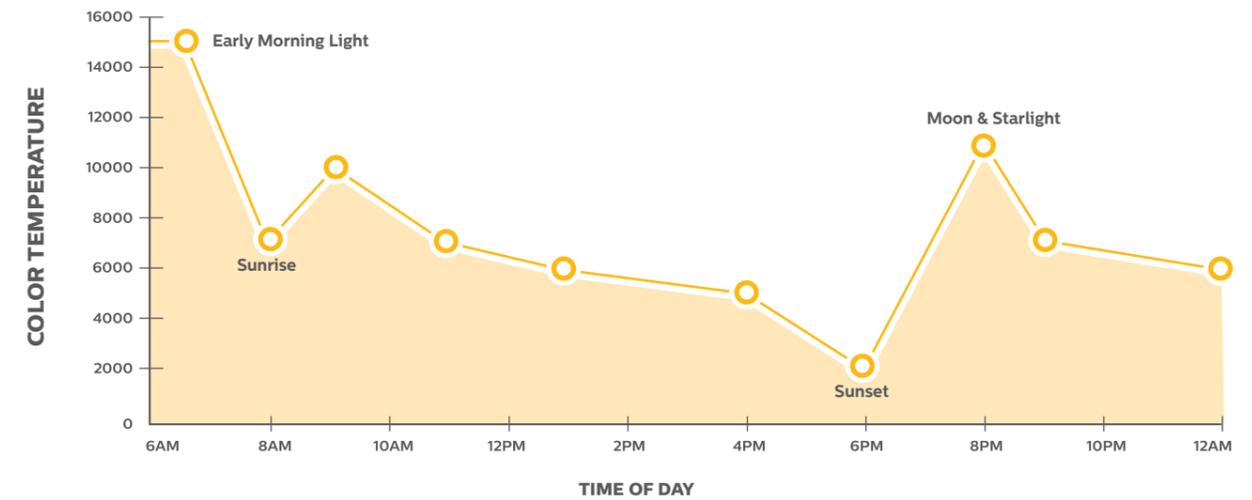

LEDs are capable of reaching their full output almost instantly after switching them on and can be switched continuously without shortening the useful life.

**Myth 16** LED light affects Circadian Rhythm Cycle

The human body uses light cues—such as those provided by the sun—to time our internal functions. These light cues also regulate mood, sleep, energy, appetite, and digestion. These daily internal cycles are called circadian rhythms. Circadian rhythm cycle is stimulated by our eyes photoreceptor cell as they measure the blue spectrum in the light. There is a small amount of blue light generated by a LED system used for general purpose lighting, but it is a tiny fraction of the emissions when compared to natural daylight. In short, a LED luminaire designed for general application does not have enough blue spectrum to stimulate photoreceptor cell in our eye, thus it cannot influence our circadian rhythm.

**Myth 10** LEDs don't operate in extreme cool environments

LEDs become more efficient when operated at cooler temperatures, so when fixtures are positioned in extreme cold they will work more efficiently and have a longer lifespan.

**Myth 11** LEDs can't be dimmed and controlled

As LEDs are digital, they can therefore be easily dimmed to the required output. Using dimmable LED drivers and a suitable control system, LEDs can be dimmed and manipulated in color temperature, and intensity to suit the application requirements.

**Myth 12** LEDs have inconsistent color

The production process of LED is characterized by the fact that it is impossible to create LEDs that are emitting the same color temperature within one batch. The threshold at which a color difference becomes perceptible is defined by a MacAdam ellipse. A MacAdam ellipse is drawn over the color space in such a way that the color at its center point deviates by a certain amount from colors at any point along its edge. The scale of a MacAdam ellipse is determined by the standard deviation of color matching (SDCM). A color difference of 1 SDCM "step" is not visible; 2 to 5 steps is barely visible; and 6 or more steps is noticeable.

**Myth 13** The color temperature of LEDs is always very cold, almost bluish

In the early days of LED, indeed LEDs were mostly on the cold side of the spectrum as this gave a higher efficiency. Today, LEDs are available in a wide spectrum of color temperature (including road application), ranging from 2700 Kelvin to 6500 Kelvin.

**Myth 14** The amount of lumen output is similar for both LED and conventional sources

When replacing conventional light sources with LED, there is a difference in lumen output required. For example, 80W Mercury 3800 lumen can be replaced by 31W LED 2800 lumen. Conventional light sources emit light over their complete surface, while LED only direct light in one direction. LED light sources are therefore easier to use, as less reflectors and diffusers are required to direct the light to the right place in the application. This results in a reduction of energy consumption as all these reflectors and diffusers reduce the amount of light available for the application.

**Myth 15** LEDs contain hazardous substances

LEDs, in comparison with high-pressure sodium, fluorescent or induction, do not contain mercury, lead or other toxic materials and are completely recyclable.

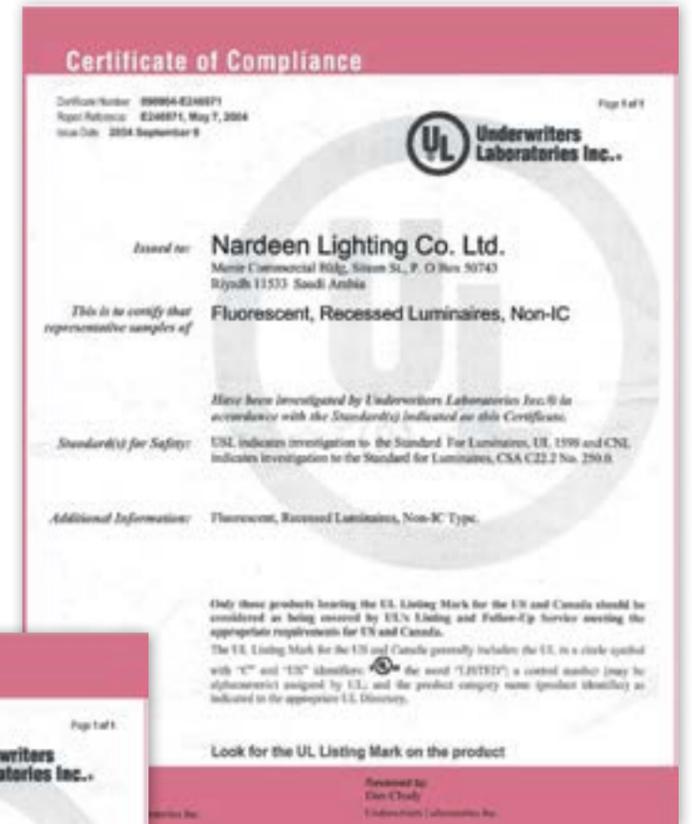

**Myth 17** LED lights are more dangerous than natural light and are harmful to the eyes

The blue light photochemical retinal hazard is assessed on the basis of IEC standard 62471. It classifies light sources into risk groups 0, 1, 2 and 3 (0 = low; 3 = high). Based on this classification, the sun would fall into the high-risk groups 2 or 3, hence the recommendation to wear appropriate safety glasses when looking into the sun for a long period. The LED lights for the consumer market from ELC members, as with all other artificial light sources like traditional incandescent, halogen and energy savers, fall into category 0 and 1. Thus, LED lighting products require no special measures for avoiding blue light photochemical retinal hazard.

LED light is as safe to the eyes as any other artificial light sources. There is a small amount of blue light generated by LED lamps. As a comparison, daily exposure to blue light on a summer day is at least 1,000 times stronger compared to artificial light indoors.

# Certificates

# Glossary

## Average illuminance

Illuminance averaged over a specified surface.

Unit: lux (lx) = lm/m<sup>2</sup>

Symbol: E<sub>ave</sub>

## Ballast

Electrical device used with discharge lamps for stabilising the current in the discharge.

## Beam spread

Angle in the plane through the beam axis over which the luminous intensity drops to a stated percentage (e.g. 50%) of its peak intensity.

## Brightness

Attribute of visual sensation according to which an area appears to emit more or less light. Brightness according to the definition is also an attribute of color. In British recommendations the term "brightness" is now reserved for descriptions of color. Luminosity should be used in other instances.

## Candela

The standard unit of light intensity, abbreviated to "cd", which is one lumen per steradian.

## CDM

See MASTERColour CDM.

## Color change

The facility to change the color temperature of a lighting installation makes it possible to create a more comfortable working environment or to introduce dynamic lighting effects.

## Color rendering

Ability of a light source to render colors naturally, without distorting the hues seen under a full spectrum radiator (like daylight or incandescent lamps). The color rendering index (CRI) ranges from 0 to 100. For further details see 'Specification data lamps'.

Color rendering index CRI

See Color rendering.

## Color temperature

Temperature in kelvin of a full spectrum radiator most closely approximate to the color appearance of a light source at the same brightness. For further details see under 'Specification data lamps'.

Unit: kelvin, K

Symbol: T<sub>c</sub>

## Contrast C (between two parts of a visual field)

The relevant luminance difference between two parts in accordance with the formula:

$$C = (L1 - L2)/L2$$

Where the size of the two parts differs greatly and where:

L1 = luminance of the smallest part (object)

L2 = luminance of the largest part (background).

## DALI

Digital Addressable Lighting Interface, a standardized communication interface to regulate lighting levels and to switch electronic HFD ballasts on and off.

## Daylight linking

Using natural light saves energy and is beneficial to individual users. Daylight linking is a technique that regulates the light output of luminaires in accordance with daylight conditions, thus maintaining a constant level of indoor lighting and ensuring comfort at all times.

## Diffuser

Optical element used to mix light rays to improve uniformity or reduce glare. An opal cover is an example of a diffuser.

## Direct lighting

Lighting by means of luminaires with a light distribution such that 90 – 100% of the emitted luminous flux reaches the working plane directly, assuming that this plane is unbounded.

## Disability glare

Glare that impairs vision.

## Discomfort glare

Glare that causes discomfort without necessarily impairing vision.

## Dust-proof luminaire

Luminaire constructed so that dust of a specified nature and fineness cannot enter when it is used in a dust-laden atmosphere.

## Fresnel lens or reflector

A Fresnel lens or reflector is an optical element of reduced height. By means of discrete steps, the basic shape is flattened yet the optical characteristics are retained.

## Glare

See disability glare and discomfort glare

## Halogen lamp

Incandescent lamp in which the inclusion of halogens in the gas filling and a high-temperature quartz envelope promote the tungsten halogen cycle, permitting a higher filament temperature. The result is a higher color temperature and a significantly extended life.

## Halogen HV

"High voltage" 230 V halogen lamp, which does not require a ballast or a transformer.

## Halogen LV

"Low voltage" 6 V, 12 V or 24 V halogen lamp. An electronic or electromagnetic transformer is required to operate low-voltage halogen lamps and is often integrated into the luminaire.

## HFD

Electronic regulating ballast which enables the light to be dimmed. Ballast functions according to the DALI protocol.

## HFD-T

Electronic regulating DALI ballast for various fluorescent lamps. With this new-style electronic ballast standard push-buttons can be used to dim the light output down to 3%. The lamp can also be switched on or off using the push-button control. Ballast functions according to the DALI protocol.

**HFM**

Compactly built electronic ballast for various compact fluorescent lamp types. See also 'Specification data luminaires'.

**HFP**

Electronic ballast for various fluorescent lamp types with warm-start principle. See also 'Specification data luminaires'.

**HFR**

Electronic regulating ballast for various fluorescent lamp types by which light dimming is possible. The main ranges of HFR ballasts allow step-less dimming down to 3%. See also 'Specification data luminaires'.

**Horizontal illuminance ( $E_{hor}$ )**

Illuminance incident on the horizontal surface.

Unit: lux (lx) = lm/m<sup>2</sup>

Symbol:  $E_{hor}$

**HPI Plus lamp**

Metal-halide high-intensity discharge lamp combining high luminous efficacy with white light of moderate color rendering. Main indoor applications are big industrial halls and lighting of discount stores, hyper-/supermarkets and DIY shops. HPI Plus lamps are usually applied in high-bay luminaires and floodlights.

**Illuminance**

The luminous flux density at the surface being lit. The illuminance in the full summer sun is approx. 100,000 lux. Recommended illuminances for work places range from 200 lux for rough work to 2,000 lux for detailed or critical work.

Unit: lux (lx) = lm/m<sup>2</sup>

Symbol: E

**Infrared remote control**

In offices and meeting rooms where the lighting requirement changes frequently, wireless infrared control offers the flexibility to set the lighting and change it at any time.

**Indirect lighting**

Lighting by means of luminaires with a light distribution such that not more than 10 per cent of the emitted luminous flux reaches the working plane directly, assuming that this plane is unbounded.

**Induction lighting QL**

Electrode-less induction lighting system characterized by good light quality, high luminous efficacy and a phenomenal life (60,000 hours).

**Jet-proof luminaire**

Luminaire constructed to withstand a direct jet of water from any direction.

**LED**

Light Emitting Diode used as a light source. Solid-state semiconductor device that converts electrical energy directly into light of a specific color or white light.

**Light output ratio (LOR)**

Ratio of the total light emitted by a luminaire to the total light output of the lamp(s) it contains measured at standard operating conditions.

**Lumen depreciation**

The decline in the light output of a light source during its lifetime.

**Luminaire**

Appliance that distributes, filters or transforms the light given by a light source (LED or lamp), and which contains all the necessary elements for fixing and protecting the light source(s) and facilitates their power supply and operating conditions.

**Luminance**

The light intensity per square meter of apparent area of the light source, luminaire or illuminated surface. Where surfaces are lit, the luminance depends upon both lighting level and reflection characteristics of the luminous surface.

Unit: cd/m<sup>2</sup>

Symbol: L

**Luminous efficacy**

The quantity of light that a light source emits per unit of electrical energy consumed. Notice that the luminous efficacy can be specified for a light source or for a lighting system (lamp and ballast).

The luminous efficacy of a system is lower than that of the light source.

Unit: lm/W

**Luminous flux**

The total light output emitted by a light source. Also the total light falling on a surface. The light output of a light source is measured in lumen.

Unit: lumen

Symbol: f

**Luminous intensity**

The luminous flux in a given direction, e.g. from a floodlight or projector.

Unit: candela (cd) = one lumen per steradian

Symbol: I

**Lumen Maintenance (\*)**

Predicted performance derived from LED manufacturer's data and engineering design estimates under the mentioned ambient temperature, based on IESNA LM-80 methodology. Actual experience may vary due to field application conditions. L70, L80 or L90 are the predicted times when LED performance depreciates to 70%, 80% or 90% of initial lumen output. Calculated per IESNA TM21-11. Published hours are limited to 6 times of the actual LED test hours.

**Lux**

The standard unit of illuminance of a surface being lit. One lux equals one lumen per square meter.

**Maintained emergency lighting**

Emergency lighting where the lamps are operated from the normal supply during standard conditions. In an emergency situation the emergency lamp (usually one lamp in luminaires of two or more lamps) remains in operation.

**Maintained illuminance**

Value below which the average illuminance on the specified surface is not allowed to fall. The maintained illuminance is specified at the end of the maintenance cycle, taking into consideration the maintenance factor.

It is one of the main specification elements for the lighting designer. In the various standards the maintained illuminance is specified for various activities.

Unit: lux

Symbol:  $E_m$

**Maintenance factor**

Correction factor used in lighting design to compensate for the rate of lumen depreciation, caused by lamp ageing (lumen depreciation and lamp failure) and dirt accumulation (luminaire and environment).

It determines the maintenance cycle needed to ensure that illuminance does not fall below the maintained value.

**MASTERColour CDM lamp**

Series of metal-halide discharge lamps with excellent color rendering and a warm or neutral color impression. MASTERColour lamps, also available as reflector lamps, are applied in projectors and downlights for shop and office applications.

**Mercury lamp**

High-intensity discharge lamp for use in industry and large public spaces. Higher quality light characteristics are obtained by applying metal-halide lamps.

**Metal-halide lamp**

Single- or double-ended discharge lamp for use in industry, public spaces and shops. Metal-halide lamps combine a natural white color with a pleasant light and a high luminous intensity.

**Movement detection**

Sensing of occupancy by movement detection ensures lights are activated only when needed and enables the lighting in a specific area to be controlled.

**Non-maintained emergency lighting**

Emergency lighting where the emergency lighting lamps come into operation only when the power supply to normal lighting fails.

**Optic**

A device that changes the direction of a beam of light, usually by reflection, diffusion or refraction by a lens. The optic may include louvers for reduction of glare.

**PL lamp**

Single-ended compact fluorescent lamp in which the discharge tube is folded into two, four or six limbs. PL lamps are characterized by unusually high light output for their length. They are applied in compact luminaires for professional and domestic use. Also available with integrated ballast.

**Power factor**

Ratio of the circuit power in watts over the product of the root-mean-square values of voltage and current. For sinusoidal waveforms, it is equal to the cosine of the angle of phase difference between voltage and current. For electronic ballasts the power factor is 0.95 so that no additional phase compensation is required.

**QL lamp**

See Induction lighting.

**Refractor**

Optical element used to concentrate light rays to focus or improve the direction of light. A prismatic cover is an example of a refractor.

**RGB**

Red, green and blue, used to specify the colors of a light source.

**SDW-T**

White SON or SDW-T lamps offer a high luminous efficacy in combination with warm-white light. The color rendering is excellent. SDW-T lamps are applied in shops and public spaces where the atmosphere should be warm and cosy.

**Sodium lamp, SON lamp**

High-pressure discharge lamp with a yellowish color appearance and an extremely high efficiency. SON and SON Comfort lamps, with improved color characteristics, are mainly applied in high-bay industrial applications.

**Solid-state lighting**

Description of a lighting device that does not contain moving parts or parts that can break, rupture, shatter, leak or contaminate the environment (such as a lamp).

**Starter**

Device for starting a discharge lamp, in particular a fluorescent lamp, that preheats the electrodes and/or causes a voltage surge in combination with the series ballast.

**Switching and dimming control**

As more and more light sources can be dimmed economically, lighting controls need to provide both switching and light regulating capabilities.

**TL5**

Linear double-ended fluorescent lamp with a diameter of 16 mm. In combination with OLC optics and high-frequency ballasts the TL5 system offers a superb performance, both in terms of lighting technology and energy consumption.

**TL-D**

Linear double-ended fluorescent lamp with a diameter of 26 mm. Available in a range of colors and color rendering characteristics.

**Uniformity ratio**

Ratio of the minimum over the average illuminance for a specified area ( $E_{min}/E_{ave}$ ). When defined as such, the uniformity ratio is also the ratio of the minimum over the maximum illuminance for a specified surface area ( $E_{min}/E_{max}$ ).

**Utilisation factor**

Utilisation factor (UF) of a lighting installation represents the percentage of the luminous flux of the lamp(s) that reaches the defined working plane. UF can be seen as the efficiency of the lighting installation. UF is used to calculate the number of luminaires required.

**Vertical illuminance**

Illuminance incident on the vertical surface.

Unit: lux (lx) = lm/m<sup>2</sup>

Symbol:  $E_{vert}$

**Visual guidance**

The sum of the measures taken to give the user of a space an unambiguous and immediately recognisable picture of the course of the path ahead.

Visual guidance is important in shops and other public buildings.

The lighting designer takes the demands for visual guidance into consideration.

**Riyadh Head Office**

P.O. Box 50743 Riyadh, 11533  
Kingdom of Saudi Arabia  
Tel: +966 11 484 9696  
Fax: +966 11 265 2194

**Khobar Branch & Showroom**

P.O. Box 31422 Al Khobar, 31952
